DIRECTIONS FOR USE

ProAcqua™ brand products can be used on all crops grown under field or controlled environments. They are designed to be part of a balanced fertility program. Recommended rates should take into account 1) soil properties (nutrient rates, pH, organic matter, cation exchange capacity); 2) weather conditions; 3) tank mix; 4) general crop health; and 5) crop stage. Application of our products at the right time and right place will ensure maximum efficiency.

When making foliar applications do not mix with strong basic materials (lime, lime sulfur, KOH) or spray oils. Can be mixed with a wide range of crop protectants. Consult the crop protectant label for any information on possible antagonism with certain fertilizers blends.

JAR TEST: 1) Use a sample of the water source. 2) Check pH and adjust according to crop protectant recommendations. 3) Add materials in the following mixing order, according to the physical formulation of the crop protectant:

- Wettable powders
- Dry flowables /water-dispersible granules
- Suspension concentrates
- Emulsifiable concentrates
- Soluble liquids or powders
- Surfactants, oils, or other adjuvants
- COMPASS MINERALS PLANT NUTRIENT PRODUCT

After 3-5 minutes observe jar for any signs of incompatibility.

This jar test is a guideline that should be used to confirm that your spray tank-mix performs as expected.
